DETAILED ACTION

1. Claims 1-24 were examined.

Information Disclosure Statement

2. Document number 2001/000536 was not considered: inventor and application number not found.

Priority

3. Applicant's claim for domestic priority under 35 U.S.C. 119(e) is acknowledged. However, the provisional application upon which priority is claimed fails to provide adequate support under 35 U.S.C. 112 for claims 1-24 of this application simply because the non-provisional application provides further detail relative to the provisional which is not enabled.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-24 are directed to an abstract mathematical idea (i.e., computation domain), which is non-statutory. To add, the specification discloses and defines "non-embarrassingly parallel" function as a mathematical algorithm (pg.6, lines 4-10). Thus, see *In re Schrader* 30 USPQ2d 1458-1459.

Claim Rejections - 35 USC § 102

Art Unit: 2123

4. The following is a quotation of the appropriate paragraphs of 35

U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

5. Claims 1-24 are rejected under 35 U.S.C. 102(a) as being anticipated by Hochberg et al., ("Simulant Inc" December (2000)). Hochberg et al., teaches a method and apparatus called a Feonor System, which places an algorithm that enables the Feonor System to be distributed across multiple computers (Note: Start up company disclosed invention on 12 December 2000).
